1630.

A New Almanacke and Prognostication for the yeere of our Lord God,

1630.

Being the second after Leape yeare.

Calculated for the Meridian of the Ancient Citie of DVRHAM, where the Pole is mounted aboue the Horizon almost 55. degrees,

He that obserueth the Wind, shall not sow, and hee that regardeth the Clouds, shall not reape, Eccles. 11.4.

BY of S. Ellen Awckland.

LONDON,

Printed for the Companie of *Stationers.*

A briefe Computation of Time compleate this present Yeare, 1630.

Since the Creation of the World.	5600
Since England was diuided into Parishes.	994
Since the death of S. Cuthbert Bishop of Durham March 20. vnto whose memorie the said day was Consecrated.	944

Vaux. 1630.

A Prognoſtication for the yeare of our Lord God: 1630.

Being the ſecond from the Biſſextile, or Leape-yeare.

Wherein is declared the ſtate of the foure Quarters of the yeare, the Eclipſes, and other things of good conſequence.

With diuers prettie notes and pleaſant obſeruations fit for all ſorts of people.

By *Iohn Vaux* of S. *Hellen Awck-land.*

Scientia nullum habet inimicum præter ignorantem.

Divining knowledge hath no greater foe,
Then ignorance, that onely ſeemes to know.

LONDON.
Printed for the Company *of Stationers,*
1630.

Of the foure Law-termes of the yeare.

Hillary Terme.

HIllary Term beginneth alwayes vpon the 23. day of Ianuary, and endeth alwayes vpon the 12 day of February, if neither of these dayes fall vpon Sunday. But Easter Terme and Trinity Terme are alwayes moveable, according to the feasts whereof they take their name.

Easter Terme.

Seventeene dayes after Easter day,
Doth Easter Terme begin alway:
And when Ascention day is past,
Till Mund'at night this Terme doth last.

Trinity Terme.

This Terme begins assuredly,
On Friday after Trinity:
And twenty dayes it doth remaine,
Before that it doth end againe.

Michaelmas Terme.

Michaelmas Terme beginneth alwayes vpon the 9 of *October*, and endeth vpon the 29 day of November, if the beginning or ending fall not vpon a Sunday. And hath eight Returnes.

A true Deſcription of the foure Quarters of this yeare. 1630.

WINTER.

VVInter (according to Aſtronomicall computation) began the 12 of December laſt 1629. at what time the Sunne entred into the firſt minute of the Southerne and Tropicall ſigne Capricornus, making the dayes ſhorteſt, and the nights longeſt, at which time he began his Northerne progreſſe towards his Aequator. This Quarter is of its owne nature colde and dry, at which time the earth is at reſt, and ceaſeth to bring forth, that it may gather together againe, and recover the loſt ſtrength againſt Summer: from whence Winter moſt commonly bindeth the earth, which it warmeth and covereth with ſnow as with a garment, and refreſheth it with ſtore of raine: For ſnow and ice are comfortable to corne, and fruit, and bringeth plenty of all things. And after the Sunne hath accompliſhed his laſt de-

grees vnder Aquarius and Piſces, he openeth the earth with new and pleaſant gales of winde, and prepareth the Spring time: and this is the generall and proper temperament of every Quarter of the yeare, which is alwayes to be conſidered in Meteorologie, leſt that we ſpeake of flowers in Winter, and of Ice in Summer.

The diſeaſes incident vnto this Quarter, are ſuch as accompany old age or dotage: viz. the Gout, Sciatica, trembling of the joynts. bleare-eyes, the Cough, the Stone and Strangury, the Crampe, Palſie, the ſhrinking of the ſinewes, Dropſies, and all colde diſeaſes that come by want of blood.

Of the Spring.

THe Spring beginneth at the Sunnes entrance into the firſt minute of Aries, making then the dayes and nights of an equall length throughout the world, which ſhall be this yeare the 11 of March. This Quarter is by nature hot and moyſt: For then the Sunne is both come neerer vnto his verticall point, and alſo to ſtarres of a hotter nature, cauſing thereby the drier windes to blow; of which is Subſolanus and Favonius, called the weſt winds, wherewith ſuperfluous humours are waſted

ſted and conſumed, the ſeed conveniently ſowne, and the ground ſtirred and made fit to bring forth; which ſetteth forward trees, vines, flowers, and leaues, and bedecketh the earth with graſſe and hearbs. But becauſe the new and tender corne lately ſprung vp requireth moyſtning ſhewers, there ariſeth in the morning with the Sun *Pleiades*, *Hyades*, & *Orion*, & in the evening *Arcturus*, tempeſtuous and moiſt ſtars, which ſtir vp raine and moiſt winds. At the length the Sunne (comming to Gemini) moveth a convenient and temperate heate to the former ſeed-time.

The diſeaſes of this Quarter are ſuch as are incident vnto infancy, which be theſe that follow, viz. the ſmall poxe, meaſells, ſquinancy, morbus Regius, ſhingles, ringwormes, or tetters, Saint *Anthonies* fire, the waterjaggs, froſgan, ſcabbs, itchings, the fellon, puſhes, inflammations, hot agues, and ſuch like.

Of Summer.

SVmmer beginneth at the Suns ingreſſe into the firſt minute of the Northerne and Tropicall ſigne Cancer, which will be the 12 of Iune. This Quarter is by nature hot and dry, at whoſe beginning there ariſeth Preſepe, Aſelli, and other fixed ſtarrs

of a moyſtning vertue, from whence by the Sunnes acceſſe is ſtirred vp raine to bring forward corne and other fruite. But after that the things growing from the earth, haue attained a iuſt increaſe, and by heat, waxeth toward maturation and ripeneſſe, the Sun approaching the hot ſigne Leo, there ariſeth Syrius and Procion, which are ſtarres of a hot conſtellation: therefore great heat is ſtirred vp, to the tempering whereof the Etheſian windes blow in the day time. Afterward the Sun comming to Virgo, the ſaid heate is mitigated by little and little, and at the riſing of Arcturus it bringeth raine.

The diſeaſes of this Quarter be collicks, riſing of the ſpleen, leproſie, pimples in the face, obſtructions, feavers of blood, apoſtumes, iaundies, pluriſies, ſtiches, inflammations, and ſuch as proceede of a duſt choller and diſtemper of blood.

Autumne, or Harveſt.

AVtumne beginneth the 14 of September, when the Sunne entreth into the firſt minute of the Equinoctiall ſigne *Libra*, making then the nights equall with the dayes. This Quarter is by nature cold and dry: For the heate ceaſeth with the Summer paſſed. And although plentifull

ſhewers

ſhewers doe then fall, ſo that the vintage is then abundant, and the winter ſeede-time made more commodious: yet notwithſtanding the remaining heate of the ayre which by the Sunnes acceſſe to hot ſtarres in Sagittarius is ſomewhat increaſed, and the moyſture of the earth drawn vp, and the ground cheriſhed and prepared for the winter following, leſt colde comming of a ſodaine, might hurt the ſeede and winter corne.

The diſeaſes of this Quarter are crudities, and rawneſſe of the ſtomacke, ſurfettings, paines in the backe, darkneſſe in the ſight, Vertigo, or turnings of the braine, head-ach, retention of the Vrine, canker, fiſtulaes, emeroyds, the ſtone and ſtrangury, tooth-ach, with impediments in the eyes, and ſuch like.

HAving now ſpoken ſomething of the foure Quarters of the yeare; I hope it will not be amiſſe (vnder favour) to ſpeak ſomewhat of the foure Quarter Seſſions of the yeare: to the end that he that can but reade, (and being any way tyed to the attendance of the Quarterly ſitting of the Iuſtices) may hereby know their ſeverall beginnings, without expecting any further warning thereof. And now to begin

with the course of the yeare and place, Michaelmas Sessions the last.

The Statute made in the second yeare of King *Henry* the fift, and the fourth chapter thereof, saith: Over all the Realme the Sessions shall be:

In the first week after { *The Epiphany or Twelft day.* / *The clause of Easter or Low-Sunday.* / *The Translation of St.* Thomas *the Martyr, which is alwayes the 7 day of July.* / *St.* Michael *the Archangel.*

Of the County or Moneth Court.

NO County from henceforth shall be holden, but from moneth to moneth; and where greater time hath beene vsed, it shall be kept still. *Magna Charta. cap.* 35. And afterward in the time of King *Edward* the fixt, this *maior terminus*, was restrained to a moneth only, as followeth.

No County Court, or Courts hereafter to be kept within this Realme, shal be longer deferred, but one moneth from Court to Court, and so the said Courts from henceforth shall be kept every moneth, and none otherwise: any vsage, custome, Statute, or law heretofore had or made to the contrary in any wise notwithstanding.

Starre-Chamber dayes.

VVEdnesday and friday throughout every Terme-time are Starchamber dayes.

Note also, that if any terme end not vpon a wednesday or friday, then, the next wednesday or friday after the ending of the Terme is a Starre chamber day.

But if a holy day fall vpon a wednesday or friday in the Terme time, then the Starre-chamber day is kept vpon the holy Eue.

Of the Eclipses of this yeare. 1630.

THere will be foure Eclipses observed this yeare in the two lights of heaven, in the terrestriall globe: Two of the Moone, and two of the Sunne. The first of the Sunne, and those of the Moone will be apparant within our Horizon, and the last of the Sunne will be without.

The first Eclipse will be of the Moone the 15 day of May according to the Iulian account, but the 25 day of the same moneth according to the Lilian account, in *France, Ireland*, and throughout *America*.

The second Eclipse will be of the Sun, the 31 of May according to the old account, but the 10 day of Iune according to the reformed account, which fearefull

Eclipse

Eclipſe (if the day be cleare) will be ſeene with vs in England at 6 a clocke at night. The middle or true coniunction of the two lights, will be at 6 a clocke 45 min. The end of this Eclipſe wilbe at 7 a clock 33 min. The digits eclipſed will be 9. 7. The third Eclipſe will be of the Moone the 9 day of November according to the Iulian account, but the 19 day of the ſame moneth according to the forraigne or reformed account, which will be viſible to vs at 8 a clocke 38 min. the middle or true oppoſition at 10 a clocke 20 min. the end of her trouble at 12 a clocke 9 min. The digitts eclipſed will be 9. 7.

The fourth Eclipſe will be of the Sunne the 23 day of November according to the Iulian account, but the 3 of December according to the Lilian account towards the Sun-riſing and meridian in *Magellanica*, vnder the meridian of new *Guinea*: But not viſible to vs in *England*.

An Eclipſe of the Moone in winter in cold and dry ſignes betokeneth great cold and freezing in the earth, aire and water. In watery ſignes it betokeneth plentie of raine and water. And in airy ſignes it betokeneth winde and tempeſt. And in fiery ſignes it betokeneth faire weather.

If

If the Moone be in any ſigne with the Dragons taile, and the Sunne with the head of the Dragon in the ſigne oppoſite, then happeneth an Eclipſe of the Moone.

And againe, if the Sunne be with the tayle of the Dragon in any ſigne, and the Moone with the Dragons head in the ſigne oppoſite, then likewiſe ſhall happen an Eclipſe of the Moone.

And if ſhe be in the ſame degree, the Eclipſe ſhall be generall; And ſo ſhe muſt be in the head, or taile in the ſame degree, or within 12 degrees, if the Eclipſe fall. And ſo in every coniunction or change the Sunne and Moone muſt be in the ſame ſigne, degree, minute and ſecond.

Of the moving of the Planets.

Saturne abideth in every ſigne 30 moneths.

Iupiter abideth in every ſigne one yeare.

Mars abideth in every ſigne 60 dayes, and 16 houres.

The Sunne abideth in every ſigne 30 dayes, 10 houres, and a halfe.

Venus abideth in every ſigne 29 dayes, and endeth her courſe in 348 dayes.

Mercury abideth in every ſigne 28 dayes and 6 houres, and endeth his courſe in 338 dayes.

The

The Moone abideth in every ſigne two dayes, and a halfe, and almoſt 6 houres, and endeth her courſe from point to point in 27 dayes and 8 houres.

To each of the fiue planets is aſſigned 3 circles, that is to ſay; *Equans*, *differens*, and *Epiclus*. There is alſo in theſe circles three manner of motions viz: *Motus directus*, *Stationarius*, and *Retrogatus*. *Motus directus* is even forward according to the Succeſſion of the ſignes, and in the ouer part of the circle called *Epiciclus*. *Motus Stationarius* is in the middle of the circle *Epiciclus*, when a Planet ſeemeth to moue neither vpward nor downeward, backeward nor forward. *Motus Retrogradus* is backward, when a Planet moueth contrary to the Succeſſion of the ſignes, and in the nether part of the circle called *Epiciclus*

The goodneſſe of a Planet is abated and afflicted by the preſence of an ill Planet, and the malice of an ill Planed is tempered and abated by the preſence of a good Planet.

Saturnus hath that name of *Saturando*, making fulneſſe and plenty. *Saturne* giveth more, and doth more hurt when he is retrograde, then when he is direct.

Iupiter is the Lord and giver of ſubſtance

ſtance, and he is called father of the gods or Planets.

Mercurius, quaſi medius currens, as running in the middle betweene *Venus* and the Moone. *Mercury* is alwayes either one ſigne before the Sunne, or one ſigne behinde him.

Sol, quaſi ſolus lucens, alone ſhining, the well of light. All the reſt of the Planets receiue light of the Sunne, as a glaſſe ſet before a candle receiveth liight of the candle.

The Moone is called the faireneſſe of the night, mother of all humours, Lady of the Sea, meaſure of times, follower of the Sunne, and changer of times.

Of Houres.

AN houre is no other thing then the 24 part of a day. And it is ſo called of the Greeke word *ωρα*, which in Latine is *tempus*.

The planetary and temporall vnequall houres, or comprehended by an vnequall number are called maſculine: even or equall houres are called feminine.

The Aſtrologians call thoſe houres combuſt, which are taken after the coniunction of the two lights: and in theſe houres an Aſtrologian doth not expedite or take in hand any buſines. Cano-

Canonicall houres are those which are addicted to divine prayers, also they suffer by themselues some partition of the time and day.

And of those diuisions there are seven: *viz. Matutina, Prima, Tertia, Sexta, Nona, Vespertina et Completoria.*

Matutina, is the dawniug of the day, *Mat.*20.1. & 28.1.

Prima, is the houre of Sunne-rising.

Tertia, is Nine of the clocke in the forenoone, *Mat*:20.verse 3.

Sexta, is twelue of the clocke, called high noone. *Luke* 23.44.

Nona, is three of the clocke in the afternoone. *Luke* 23.44.

Vespertina, is the houre of Sunne set.

Completoria, is the houre of Twilight.

At which time in some places, they vse to ring a bell for the space of an houre, by the sound whereof all trauellers and strangers may draw to the towne, and not wander out of their way.

The *Quadrants of an houre.*

AN houre is divided into foure Quadrants or quarters, and every quarter containeth 15 minutes: so that the whole houre is divided into 60 minutes.

A

A minute is the ſixtie part of an houre, and it is ſo called of the verbe *minuo*, becauſe by little and little it diminiſheth the houre.

A minute is divided into 60 ſeconds: and every ſecond into 60 thirds, and ſo vnto an infinite number by a Sexagenary diviſion.

Diſcripſi hic breviter cunctis cũpartibus annũ
Vnde patet, celeri quod curſu labitur ævum,
Et veluti rapido ſemper pede transvolat ætas:
Sic hominũ quoq; vita fugit, nec fixa manebit:
Ergo ſumme Pater me æterna ad ſecula ſerva,
Nã nihil hæc vita eſt, niſi cura laborq; perennis

Here followeth a Table, *plainly explaining the Act againſt Vſurie*, 21 Iacobi, cap. 17. Anno Domini 1624. *It was enacted that no man ſhould take for his money aboue eight pounds in the hundreth, for a whole yeare: that is to ſay, for euerie fiue Crownes two ſhillings*, &c. *As in the* Table *following.*

Principall.

Principall.	£	s	*Interest*	£	s
5 Crownes is	1	5	Interest	0	2
10 Crownes is	2	10	Interest	0	4
15 Crownes is	3	15	Interest	0	6
20 Crownes is	5	0	Interest	0	8

395 Crownes is	98	15		Interest	7	18
400 Crownes is	100	0		Interest	8	0

THis Act being made to continue for seven yeeres from the feast of Saint *Iohn Baptist Anno Dom.* 1625. and so to the end of the first Session of Parliament then next following, was *Anno* 3. *Car. Cap.* 4. made perpetuall.

This last Table increasing from five Crownes, to 400. which makes 100. pound is easie enough without any familiar example. Because you haue at the end of any broken or whole summe vnder 100. pound, the iust interest placed directly against it.

And there is no man that can rightly computate it otherwise. For you cannot reckon it iustly by the rate of even pounds but

but either your account will exceede or come short. For if you shall take 19 d the pound, it will come fiue groats short of 8 in the 100. And if you shall take 1 d farthing for the pound, it will come to eight pound 5 s for 100 pound, and so exceed. But for more ease doe thus: Divide your 100 pound into eight equall parts, (because it is rated at 8 in the 100) and it will be 8 times 12 l 10 s. For which (according to the Statute) you giue or take 8 times 20 s. which is 8 l. Againe, subdivide 12 l 10 s into 20 equall portions, (because you would know for how much you must giue or take 12 d) and it will come iust to 20 times 12 s 6 d, for which you giue or take 20 times 12 s 6 d. which is 20 s. Now, couble 12 s 6 d and it will make 5 crownes which is 25 s for which you giue or take 2 s in the yeare, &c. as in the former Table.

When money was lent for 10 in the 100 the borrower paid for foure Crownes two shillings. But now being rated at 8 l for 100 l it is fiue Crownes for two shillings for a whole yeare.

A perfect rule whereby to finde the Golden number for ever Without any addition.

FRom the yeare of our Lord propounded, deduct 1500. and divide the rest by 19. and that which remaineth is your desire: But if nothing remaine, so that the division be equall, 19 shall be the golden number of the yeare propo'e.l.

Example.

In this yeare of our Lord 1630. I desire to know the golden number: wherefore I substract 1500. and I divide 130. which remaineth by 19. and there resteth 16 for the golden number for this yeare: And this is the readiest way to worke by

Here followeth a new devised Table, whereby to know the Epact for the English or forraign computation for ever; by sixe Article numbers framed for that purpose, and placed directly over the golden numbers; serving for any yeare past, present, or to come.

Article numbers for the English account	10	20	30
Article numbers for the forragne account	30	40	50

The golden numbers.			
	1	2	3
	4	5	6
	7	8	9
	10	11	12
	13	14	15
	16	17	18
	19	0	0

The vse of this Table is thus.

FIrst finde in the Table, the Golden number for the yeare proposed, and adde vnto it, the article number, which is

placed directly over it, & those two numbers so added together (if they doe not exceed 30) is the Epact of the yeare desired. But if they doe exceed 30. deduct 30. and that which remaineth is the Epact of the yeare which you seeke for.

Example.

I would know the Epact for this yeare of our Lord 1630: the first of *March*. Wherefore by the rule before taught, I find the Golden number to be 16; wherwith I enter this table, and I find directly placed over the head thereof for this Computation, the article number 10: which being added vnto the Golden number, maketh 26. which is the Epact for this yeare. The same order must bee observed with the article numbers of the forraigne computation, casting away 30: as oft as you can.

How to find the change of the Moone by the Epact.

Adde to the Epact the number of monthes from *March* to the proposed month, including the said month of *March*: then take that number from 30: if the moneth wherein you desire to know the change haue 31 dayes in it, or

if the moneth haue but 30 dayes, then take it out of 29. and you ſhall haue the day of the change remaynyng. But if in caſe the Epact, and the number of the moneths ſo added exceed 30: take away 30 as oft as you can, and that which remayneth deduct out of 30, then looke what number is left of 30, and that ſheweth the day of the Moneth when the Moone chaungeth.

Example.

I would know when the Moone changeth in Iuly 1630. the Epact is 26 and from *March* to Iuly is 5. which are both in number 31. out of which I take 30. and there remaineth 1. and that one I take out of 30. and there reſteth 29 and ſo the *Moone* changeth on the 29. day of Iuly.

To prevent contentious and wrangling ſuits in law.

IT was enacted *Anno* 21. *Iacobi, cap.* 16. That all Actions vpon the Caſe, (other then for ſlander) Actions for Accompt, Actions for Treſpaſſe, Actions for Debt without ſpecialty, detinue & Repleui for goods or cattell, Actions of Treſpaſſe. *quare clauſum fregit*, ſhal be commenced & ſued within ſixe yeares next after the cauſe

of

of ſuch Actions of ſuit, and not after.

Actions of Treſpaſſe, of Aſſault, Battering, wounding, impriſonment, or any of them ſhall bee commenſed and ſued within foure yeares next after the cauſe of ſuch actions or ſuite, and not after.

Actions vpon the caſe of words, ſhall be commenced and ſued within two yeares next after the words ſpoken, and not after.

But all the Actions of Accompt concerning the the trade of Merchandize betweene Merchant and Merchant, their Factors or Servants are excepted out of this Statute.

This I thought good to publiſh, that every one might know it, for his owne good, and ſaue their money when the law is againſt them.

FINIS.

God ſaue our ſoueraigne Lord the King, The Queene and their Royall Offspring.

An Abſtract of a direction, concerning Reall Contracts.

WHoſoever ſhall deſire to purchaſe, or put to Sale, to take in Leaſſe, or let to Farme, to Grant, Aſſigne, Exchange, or otherwiſe to Contract, or Deale, with or for any Lands, Leaſſes, Rents, Annuities, Mantion-houſes, Offices, ſaleable, or other Eſtates of what yearly value ſoever, or to ſaue any ſuch from danger of Forfeiture, through the want of preſent money. May either in their owne names, or in the name of any other truſted by them haue ſecure meanes with all Privacy requiſite; for the ſpeedy effecting what ſhall be deſired, in any the Caſes afore-ſaid, or the like. *At the Porcht-Houſe againſt St. Andrewes Church in Holborne.* *LONDON.*

God ſaue our gracious King *Charles.*
